

1. How to create a farm on Copyright Flow?

You'll start on [Copyright Flow art](#), using the [Ethereum Rinkeby testnet](#), where the tokens are free. Get free tokens [HERE](#).

If you've not already done so, you'll need to install [MetaMask](#) on your desktop browser. Once you've installed it, make sure that you are connected (there should be a little green light, and the word connected). If you're not connected, try refreshing the page, and/or click to connect manually.

What is a farm?

A farm is a place where you can display and show everyone your NFTs. Create a collection -> create your NFTs -> add them to the farm

Click on the "Farm Builder" button on the left toolbar. It may take a few seconds to load, we directly read to/from the blockchain and rely on a lot of decentralization.

When it loads up, you'll see an option "Add new Farm". Select the offered option. After you do that, a pop-up form will appear where you will enter all data that is required for building a farm.

The screenshot displays the CopyrightFlow.art Farm Builder interface. On the left is a sidebar with navigation links: Home, NFT Market, Your Wallet, Collection Manager, Market Builder, Farm Builder, NFT Bridge, Guides & FAQ, and Copyright Flow. The main area shows the 'Farm Builder' section with a 'Welcome to the administration panel for all' message and an 'ADD NEW FARM' button. Below this is a preview of a farm named 'NIM' with a green logo. A modal window titled 'New Farm' is open on the right, containing the following fields:

- Name ***: Enter a name for your farm
- Staking Token ***: NIF (Unify)
- Minimum Stake ***: 0
- Maximum Stake ***: Maximum amount of tokens to stake with
- Description**: (Empty text area)
- Click to Choose Image...**: (Image selection button)
- Controller Address ***: 0x16922cf675331f2d9dc719b1a916f8d829b04dcd
- SOCIAL (OPTIONAL)**: Fields for Twitter Url, Discord Url, Telegram Url, Medium Url, Instagram Url, Youtube Url, Website Url, Email address, and Phone.
- Custom Link**: Enter a link to a custom url
- Custom Link Text**: Enter a link text for your custom url

At the bottom of the modal, it states: '0.05 ETH developer fee per farm. Unlimited farm creation if holding 5000 NIF or owning one of our farm builder wildcards. No subsequent fees, one-time payment. Gas fees always apply.' There are 'CLOSE' and 'CREATE FARM' buttons at the bottom right.

- Name - enter the name of your farm (be creative).
- Staking Token - NIMs token \$CCIM is automatically chosen, but you can enter a custom token or LP Token address. If you select the custom token, you'll need to enter a custom ERC20 Token address (you can look it up on a block explorer like Etherscan, BSCscan, Blockscan...)
- Minimum stake - enter the minimum amount of tokens that you want to allow stakers to lock, it could be 0.
- Maximum stake - enter the maximum amount of tokens that you want to allow stakers to lock. This is by address, so it's always possible that people can stake the maximum across multiple wallets, however, the points cannot be transferred between wallets.
- Description - be creative (optional)
- Image - logo or something representing the content of the farm (optional)
- Controller Address - fills out automatically
- Social - links to your social accounts (optional)
- Custom link - link to your website to let people know where they can read more about your farm (optional)

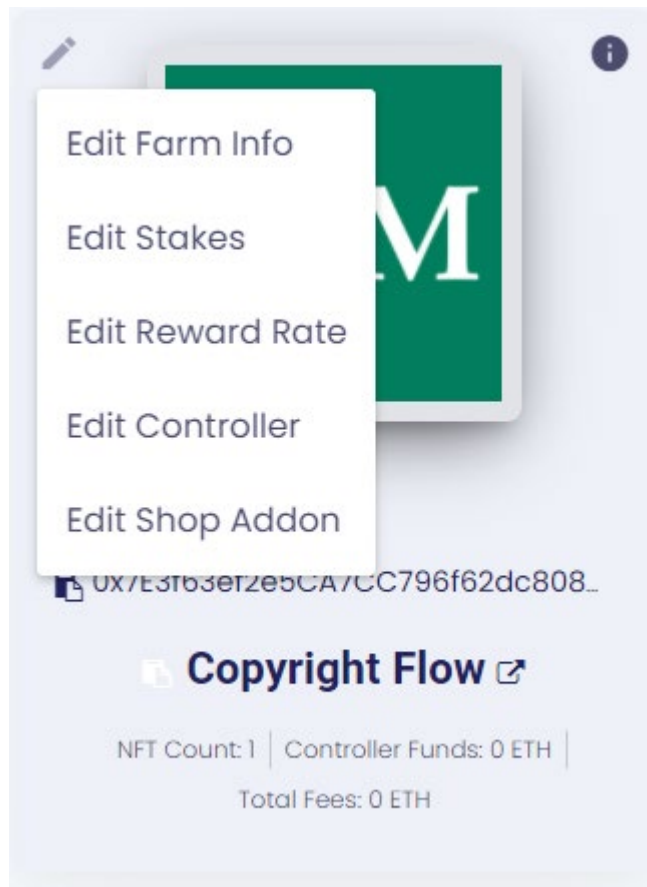

At the bottom of the form, you can see the fees for creating a farm. This varies by network, and users holding a sufficient amount of CCIM/CTIM token or Farm Builder NFTs (for the blockchain that is on) are exempt from fees.

If you're happy with your farm data, hit the "CREATE" button. Verify the details in the MetaMask pop-up.

Exit the "Farm builder" form, and you should see your new farm.

2. How to edit my farm info?

Once you've created your farm, click on the pen icon on the left side of your farm. A number of options will appear:

Click on the “Edit Farm Info” option. A form will appear where you can change information about your farm. Like: the name, description, image, social, and custom link. If you’re satisfied with the changes, hit “UPDATE” and confirm it in the MetaMask dialogue.

3. How can I edit stakes on my farm?

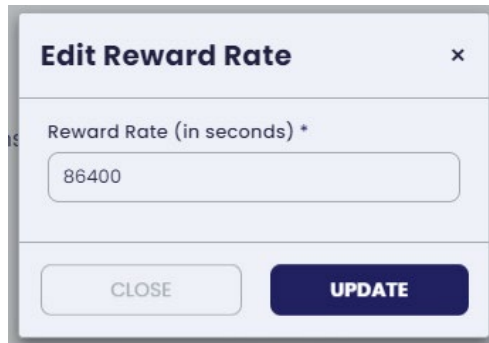

Click on the pen icon on the left side of your farm, and select the “Edit Stakes” option.

A screenshot of a form titled 'Edit Stakes'. It has two input fields: 'Minimum Stake *' with the value '0' and 'Maximum Stake *' with the value '250'. At the bottom, there are two buttons: 'CLOSE' and 'UPDATE'.

There, you can change the minimum and maximum amount to stake. Once you’re happy with your changes hit “UPDATE”, and confirm it in the MetaMask dialogue.

4. How can I edit the reward rate on my farm?

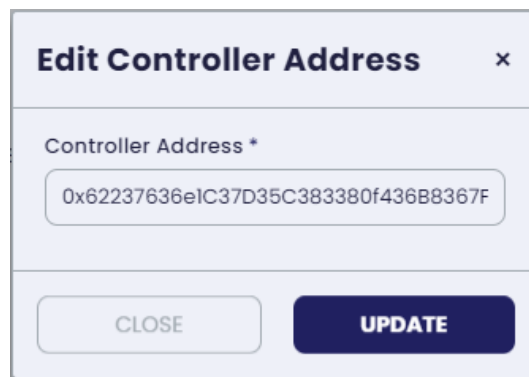

Clicking on the pen icon on the left side of your collection, an “Edit Reward Rate” option will appear. Reward Rate (in seconds) represents the points given to people who stake their tokens at your farm for NFT rewards. (60 seconds * 60 minutes * 24 hours = 86400 seconds per day to earn 1 point)

A screenshot of a modal form titled "Edit Reward Rate" with a close button (X) in the top right corner. The form contains a label "Reward Rate (in seconds) *" above a text input field that contains the value "86400". At the bottom of the form, there are two buttons: a light blue "CLOSE" button and a dark blue "UPDATE" button.

For each one token staked how many seconds to earn one point. If you want to speed it up, reduce the time to accrue 1 point or increase to slow it down.

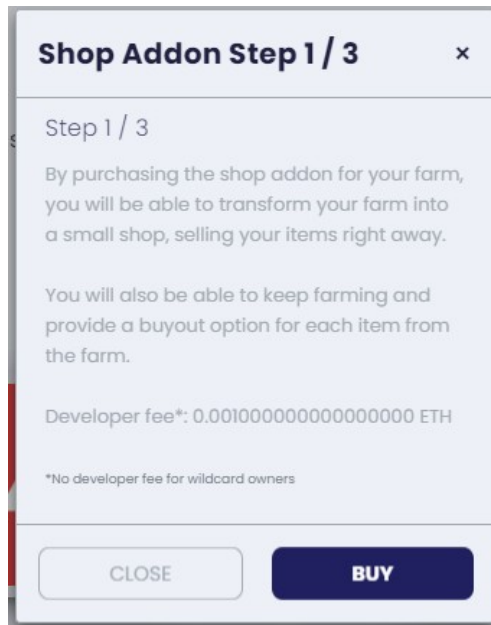

5. How can I edit the collection address on my farm?

Clicking on the pen option, an “Edit Collection Address” option will appear. Select it, and change your controller address:

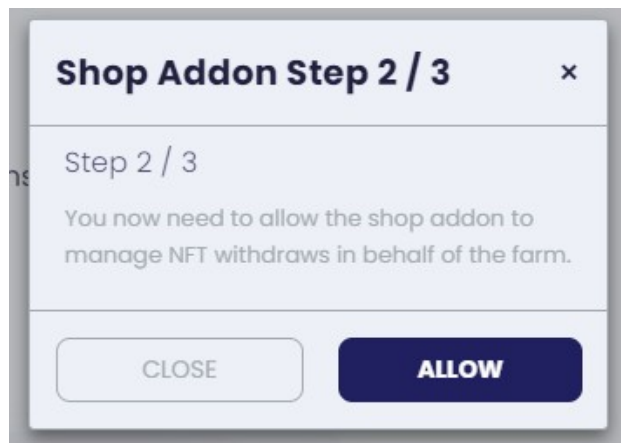

A screenshot of a modal form titled "Edit Controller Address" with a close button (X) in the top right corner. The form contains a label "Controller Address *" above a text input field that contains the hexadecimal address "0x62237636e1C37D35C383380f436B8367F". At the bottom of the form, there are two buttons: a light blue "CLOSE" button and a dark blue "UPDATE" button.

6. What is shop addon used for?

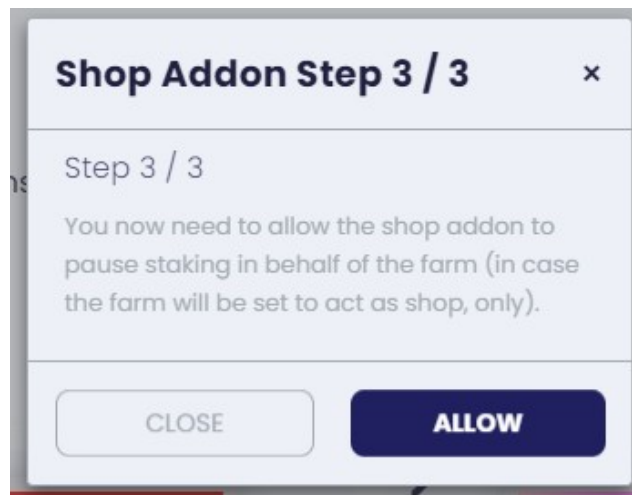

By purchasing the shop addon for your farm, you will be able to transform your farm into a small shop, selling your items right away. You will also be able to keep farming and provide a buyout option for each item from the farm.

After you click “BUY”, confirm it in the MetaMask dialogue. Then, after your request has been approved, you will have to allow the shop addon to manage NFT withdrawals on behalf of the farm.

Next, you need to allow the shop addon to pause staking on behalf of the farm (in case the farm will be set to act as a shop only).

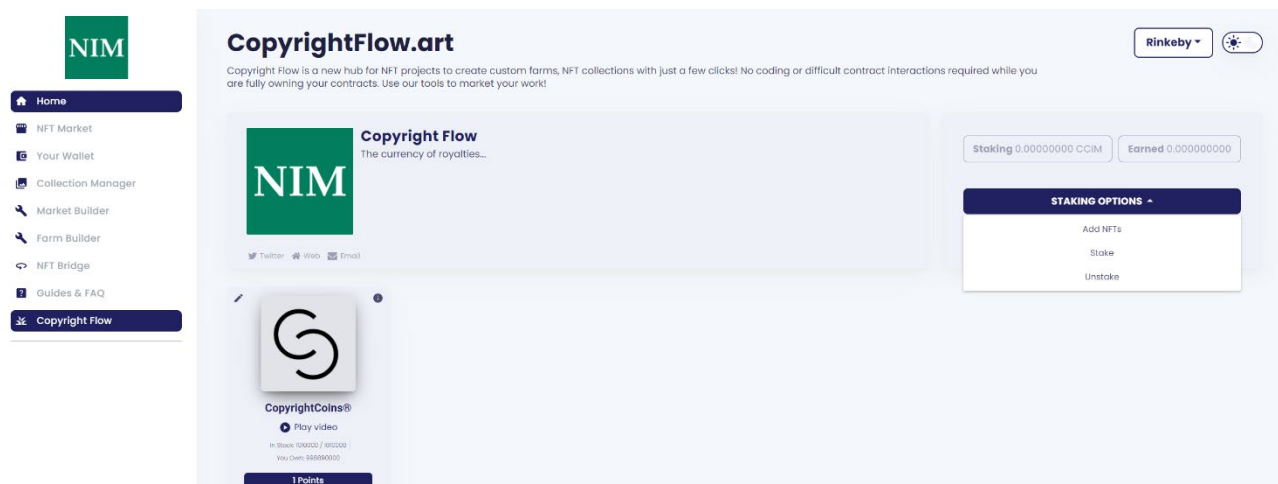

When you confirm the last step, you can enable shop features on your farm. Now, you can edit your Farm shop. You can choose between 3 options:

- Shop disabled - farm operates in standard mode
- Farming + Buyouts - farm operates in standard mode, but allows buyouts for items that have a defined buyout price
- Only Buys - staking disabled, only buying allowed. If you turn this on after people started staking, they will be able to continue staking and redeeming until they unstake their entire stakes.

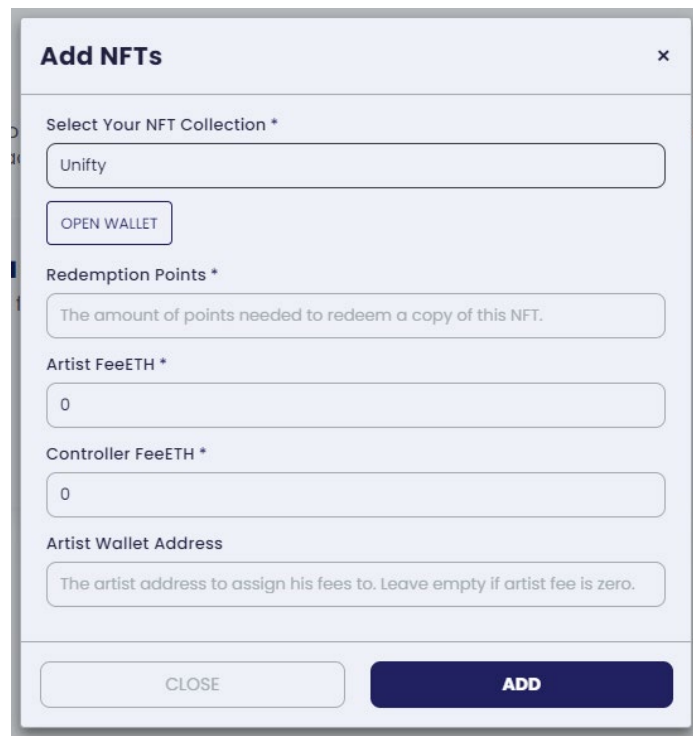

-

7. How to add NFTs to a farm?

Once you create your farm, you will have the option to add NFTs.

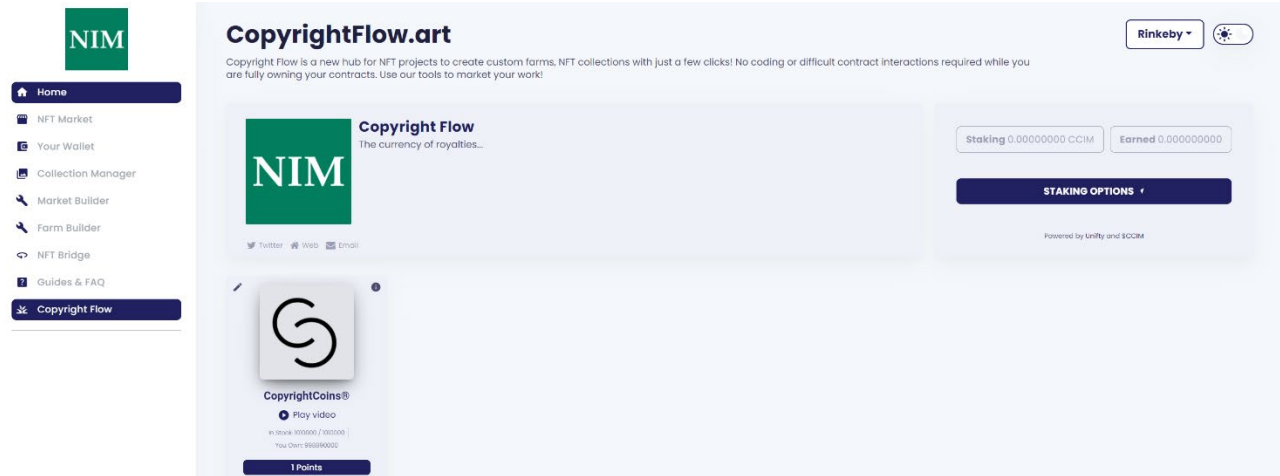

Clicking on the “Add NFTs” option, a pop-out form appears:

The image shows a modal window titled "Add NFTs" with a close button (X) in the top right corner. The form contains several input fields and buttons. The first section is "Select Your NFT Collection *" with a text input field containing "Unify" and a button labeled "OPEN WALLET" below it. The second section is "Redemption Points *" with a text input field containing the placeholder text "The amount of points needed to redeem a copy of this NFT.". The third section is "Artist FeeETH *" with a text input field containing "0". The fourth section is "Controller FeeETH *" with a text input field containing "0". The fifth section is "Artist Wallet Address" with a text input field containing the placeholder text "The artist address to assign his fees to. Leave empty if artist fee is zero.". At the bottom of the modal, there are two buttons: "CLOSE" and "ADD".

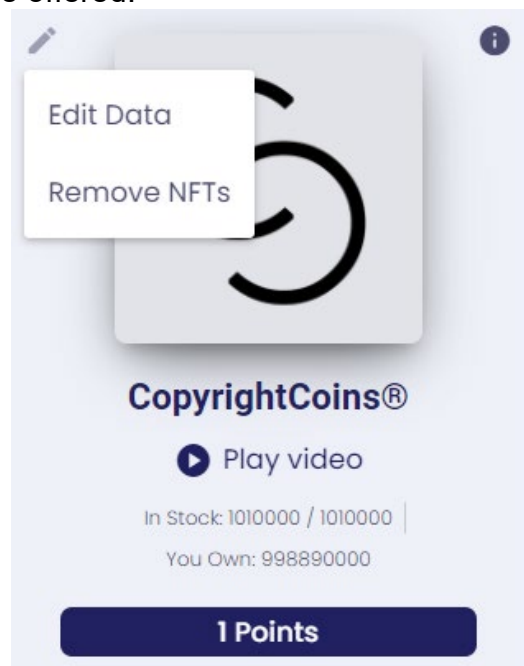

First, you need to open your wallet, where all of your previously created NFTs are. Choose the one you want to add to your farm. Once you select the NFT, you'll need to enter the amount of NFTs to transfer. You can see how much you own and therefore enter the amount.

- Redemption points - here you enter the number of points needed to redeem a copy of your NFT. (e.g. if you set the maximum stake at 250, and you're staking for a week - $250 * 7 = 1750$)
- Artist FeeTH - let's say that you created a farm for someone, and you're adding their NFTs to it. You want to give them their "commission" right? That is the artist fees. You enter the redemption fee for the mentioned artist. As people would say - "pay the piper". On the other hand, if it's your artwork, you can leave it at 0.
- Controller FeeTH - redemption fee for the controller - this is you!
- Artist Wallet Address - in the case mentioned before, where you have someone else's NFTs, they will give you their address, so they can get the redemption fees. In case the artist fees are set at 0, then leave this field blank.

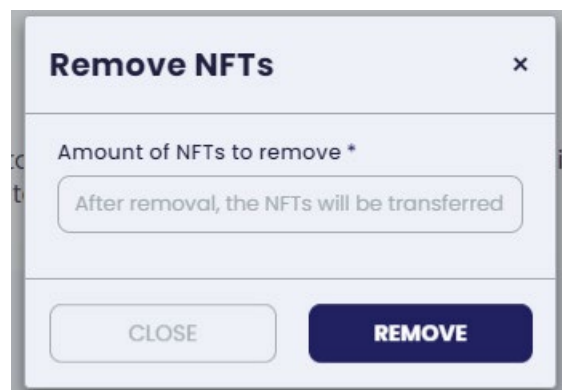

Now, after you confirm the transaction in the MetaMask pop-out, you should be able to see your NFT.

Let's see what options are offered:

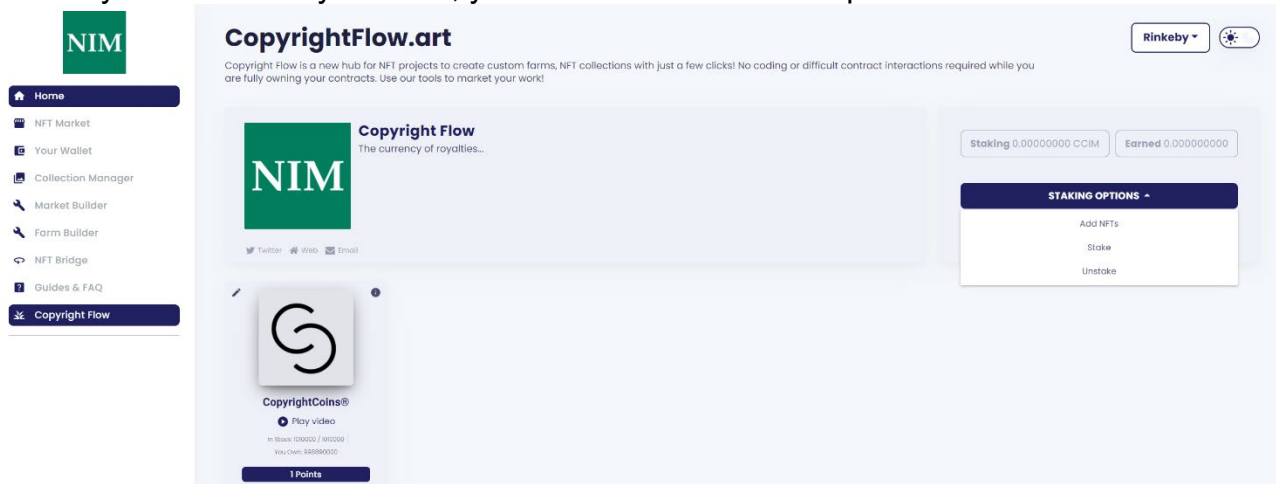

You can edit the data for your NFT (Redemption Points, Artist FeeTH, Controller FeeTH, and Artist Wallet Address), and you can remove NFTs.

Just enter the amount of NFTs you want to remove from the farm.

Once you've created your farm, you can see a number of options:

When you choose “Stake”, a pop-up form will appear.

Stake

×

Staking Amount

100

Add Max. (9900.000000000000000000000000 CCIM)

CLOSE

STAKE!

There, you can enter the amount to stake. By using this option, you can lock tokens. Let's say that you will stake 100 CCIM, tomorrow you will see on the site that you have 10 points, the next day 20, and so on. They are purely internal to Copyright Flow (NIM) and can't be transferred. You use them to buy NFT's on the farm. At the bottom, you can see how much can you stake to reach the max amount (this is set before while creating the farm). You can't stake more than the maximum, 9900 CCIM in this case.

Once you enter the amount you want to stake, you can see the following (I staked 100 CCIM)

•

The “Earned” is the points you’ve accrued. After that, you need a certain number of points to redeem for an NFT. You get 1 point for every token staked each day.

Next, by unstaking, it means you just won’t be earning more, but any accrued yet unspent tokens will be saved.
